SECURITY LOCK

EXPERIENCE THE ULTIMATE SECURITY FEATURE FOR YOUR .AT DOMAIN

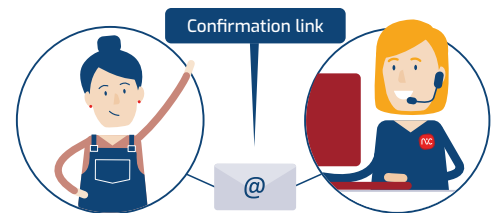

Security-Lock

What is Security Lock?

Security Lock is a powerful security feature by nic.at that provides an additional layer of protection for your .at domain against unwanted data changes, cancellations, or takeovers. With Security Lock activated, any transaction on your domain data must be authorized by e-mail.

How does Security Lock work?

As soon as nic.at receives a transaction on your domain data, a link for confirmation will be sent to your provided Security Lock e-mail address. This means that changes are only carried out after verification and authorization by you or an authorized person appointed by you.
